

SHOP RAG

Greetings!

The mild weather has us thinking spring!

Building I is close to completion. Three garages are currently available in Building I. There are two 30x50' garages (one is shown above) and one 40x50' garage. These spaces are blank canvases awaiting customization.

This month we'll share about custom paint matching, car show kick-off, and an electric concept car.

Happy Motoring!

Custom Paint Matching

If you're restoring a vehicle, airplane, boat, or snowmobile at some point you may need to have paint matched.

The [NAPA](#) on Kasota in St. Paul is a fantastic resource. They rank second in paint sales across the country, second only to a store in California. So they know what they're doing!

They can custom match paint for exterior and interior needs. Matching color and sheen to get it looking just right. They sell products to recolor interior panels allowing you to completely refresh an interior without having to purchase new components.

Keep them in mind when working on your next project.

Car Show Season Kick-Off

We know most of you are ready for winter to be over. There are a few more snowmobile events in March, but we're guessing you're ready for car show season to start.

The 64th Annual GSTA Rod & Custom show will take place April 4-5 to get the season started.

The show is held at the Minnesota State Fair Coliseum and is always a good time at the perfect time of year when seeing shiny cars feels like good medicine.

Hours and discount tickets are available on the club's [website](#). If you go to the show be sure to stop by the Garage Solution Condominium booth and say hi!

Introducing the DC Aero Sport Lounge

Electric vehicles are going to be part of our future. There are more and more options coming to market.

This [DS Aero Sport Lounge](#) concept gives us a glimpse of what style may be coming.

The DS is a luxury brand of the French PSA Group. They are known for their design flair and the Aero Sport Lounge doesn't disappoint.

This car has an electric powertrain worthy of a true luxury vehicle and previews design styling for future production models. Aerodynamics were of utmost importance in the design and yet they wanted a tall and wide crossover.

The car is powered by a single electric motor that produces 670 horsepower.
